

# SPI

Serial Peripheral Interface

A synchronous full duplex serial communication

Always one master, mostly Arduino/RPi/PC

Number of slave depends on number of 'SS' pins on Master

4 wire communication. MISO, MOSI, SCK, SS(active low)

**ADC, touchscreens,  
memory cards, cameras,  
sensors etc**

High throughput,  
flexible bit rate

Low power, less  
complex

More pins, only one  
master

Short distance
